

Department of Computer Science and Engineering

Level/Term: 2/I, Spring-2026

Physics II (PHY 211)

Assignment Questions

1. Explain the formation of Lissajous figures and discuss their different patterns produced by two mutually perpendicular simple harmonic motions. **03**
2. Discuss the differential equation of a damped harmonic oscillator (DHO) and obtain its general solution for different damping conditions. **06**
3. SHM is represented by $y = 10 \sin(10t - \frac{\pi}{6})$, where y is measured in meters, t in seconds and the phase angle in radians. Calculate (a) the frequency (b) the time period (c) the maximum displacement (d) the maximum velocity and (e) the maximum acceleration. **06**

Assignment submission date: 18 May, 2026

N.B.: After submission of your assignment, you will put your signature in the “Assignment Collection Sheet”.

Md. Gulam Mustafa

Lecturer (Physics)
